ECO2022 COMPLIANT STOVES

DEFRA, the Department of the Environment, Fisheries and Rural Affairs, included wood burning stoves in their 2019 Clean Air Strategy. Their aim by doing this is to reduce the amount of harmful emissions that affect air quality by ensuring stove manufacturers improve the performance and efficiency of their stoves.

By January 2022 it will be law that all solid fuel appliances sold after that date have to be Eco Design Compliant. To be Eco Design Compliant, stoves will need to significantly improve emissions when compared to current stoves on the market or to open fires.

Capital Stoves displaying the **Eco 2022** logo shown in this brochure, have been tested in an independent approved test house and have achieved the requirements of Eco Design Regulations. Registration has also been made with **HETAS** (Hetas is a national organisation working for consumer safety and the wider public interest in safe, efficient and environmentally responsible use of biomass and other solid fuels) and **DEFRA**.

A requirement of Eco Design Regulations is that all gas and multi fuel appliances display an energy rating. All Capital Eco 2022 Ready Stoves have A or A+ ratings.

At Capital we launched our first range of fully compliant Eco 2022 Ready Stoves in 2018. We were proud to do this knowing we were one of the first companies to have stoves that were already achieving the necessary

standards. Look out for the **Eco 2022 logo**, complemented by the **HETAS** and **DEFRA** registrations as shown below and throughout the brochure. These stoves not only reduce the level of harmful air pollutants but they also run more efficiently using less fuel, so will cost less to operate.

Our aim at Capital is to ensure all our stoves are fully Eco 2022 Ready well before 2022. We are more than two thirds of the way there already.

Improving our carbon footprint is a key part of our business philosophy. Vital to that strategy is our continued work on Eco 2022 Ready Stoves and our partnership with the National Forest.

CONTRACTIONAL FOREST

MAKE YOUR MARK. PLANT A TREE.

We are excited to have teamed up with the National Forest, one of Britain's biggest environmental projects, covering 200 square miles of Leicestershire, Derbyshire, and Staffordshire.

For every Capital Eco Stove that is purchased, you are helping to grow the National Forest and create woodland habitats that will benefit people and wildlife for years to come. Simply look out for the National Forest logo throughout this brochure.

In 27 years, the National Forest has grown the region's woodland cover from 6% to 21%. By supporting this initiative, you're helping us to make habitats for wildlife and grow a healthier, happier Britain. For more information about the National Forest please visit www.nationalforest.org

Avebury Eco

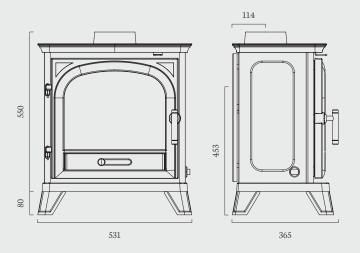

The Avebury Eco is a highly efficient, multi fuel stove from our new Eco 2022 stove range. DEFRA approved for burning wood in a smoke control area, the Avebury is constructed from cast iron for durability and maximum heat.

ECO 2022

HETAS defra

Featuring a large, arched glass picture window and airwash system for maintaining an optimal view of the flames, the Avebury is supported by the Capital Lifetime Warranty and is suitable to be fitted on a light duty hearth as pictured here with a 20mm polished granite hearth and rear flue exit.

1220 mm (W) x 140 mm (H) x 105 mm (D)

Geocast Contemporary Steel Available in 48"

1220 mm (W) x 150 mm (H) x 60 mm (D)

STOVE VENTILATION

Houses built before 2008: Houses built before 2008 are likely to have an air permeability greater than 5m³/h.m² so stoves with an output below 5kW do not require an air vent. However, stoves with outputs above 5kW require a permanently open vent. So for each kW of output above 5kW allow 550mm² of air supply. Extensive renovation of an older property carried out after 2008 may reduce the air permeability to less than 5m³, in which case the guidance for houses built after 2008 should be followed. Chimneys with flue stabilisers are subject to different ventilation requirements.

Houses built after 2008: Houses built after 2008 with an air permeability of less than 5m³/ h.m² require the air supply to be calculated for the whole of the stove's rated output. This means that the installation of stoves with an output of less than 5kW must now have a permanently open air vent. Allow 550mm² of air supply for each kilowatt of rated output. Seek advice from your retailer and building regulator.

CAPITAL STOVE LIFETIME WARRANTY

All Capital multi fuel and wood burning stoves are covered by a Lifetime Warranty for added peace of mind (valid for original purchases only) from date of sale. This Warranty excludes the following naturally wearing consumable items; door glass, firebricks, rope seals, baffle and grate (including riddling mechanism).

This Warranty also excludes the "warm white enamel" finish on any of our stoves. Enamel finish products are inherently susceptible to crazing and chipping in the normal wear and tear of the product life.

In addition, the following criteria must be met:

Sight of the data plate that should have been fitted by the approved installer.

Proof of installation by HETAS or other approved body, or letter from Building Control confirming that the installation was installed in accordance with the Building Regulations.

Proof of purchase from one of our approved suppliers.

Proof of annual sweeping of chimney, at which time an inspection as to the condition of the chimney should be carried out to allow for necessary maintenance to be performed.

CLEANBURN STOVES

To burn fuel in a smoke controlled area the law determines that either the fuel should be smokeless or the appliance should be approved by DEFRA (Department of the Environment, Fisheries and Rural Affairs) normally these appliances are approved by DEFRA for burning kiln dried wood. Some of our DEFRA approved products are capable of burning both kiln dried wood and anthracite in smoke control areas, a dual fuel use that most cleanburn products cannot offer.

All Capital Stoves are manufactured from cast iron or steel therefore it is vital that appliances undergo a period of "burning in", this involves small fires initially, gradually increasing in size with each firing. If this process is adhered to you should experience years of enjoyable, trouble free use.

All Capital Stoves are CE approved to EN13240.

Please note many of the flue pipes shown in this brochure have been sprayed with one of Capital Fireplaces high temperature paints to match the finish of the stove.

The use of unauthorised fuels such as petro-cokes will also invalidate the Warranty.

All Capital gas stoves are covered by a full 1 year parts and labour Warranty with a further 2 year parts only Warranty. Subject to proof of annual service history, please contact your retailer for more information.

Capital Fireplaces Ltd will accept no responsibility for installations which have been carried out that are not in accordance to the Building Regulations or if the conditions stated in the manufacturer's instructions are not adhered to. Warranty applies to parts only.

IMPORTANT POINTS

Always read user instructions prior to initially using the stove. We recommend burning kiln dried wood, this will give you up to twice the heat output of freshly felled timber and helps reduce tar build up in the flue.

Do not overload the stove at any one time.

Never burn household rubbish as this can give off harmful gasses and will reduce the performance of the stove.

Capital Fireplaces Ltd reserve the right to change specification or de-list products at any time. Due to the nature of the materials and appliances used within this brochure, actual finishes and colours may vary slightly. Flames shown may also vary depending on gas type, fuel quality and the performance of the flue or chimney, images in this brochure are for illustration purposes only.
