IMPORTANT!
Clearances must be adhered to. Failure to do so will damage the stove & invalidate warranty.

Clearances to:-	Side (mm)	Above (mm)
Combustibles	350	600*

* If the mantle-piece protrudes further than 100mm from the fireplace, then it will be necessary to have further clearance to the top of the stove.

The distance the mantle protrudes past the 100mm should be added to the clearance.

For example, if the mantle protrudes 200mm, the clearance to the mantle should be 700mm.

Warranty

Carron Stoves are supplied with a 3 year stove body and 1 year inner components warranty. This warranty does not cover items considered consumables. These items include door glass, fire bricks, fire rope and grates. The use of incorrect fuels would invalidate this warranty. This appliance must be installed by a HETAS engineer. Proof of purchase and certificate of installation would be required in the case of a warranty claim. Due to limitations of the printing process, colour reproduction of enamel stoves may vary slightly from those shown. Please consult your local stockist for more accurate colour matching. Occasionally the enamel finish can show a crazing/cracking effect on the surface of the stove during use. This effect will normally lessen as the stove cools and should not be considered a defect. This crazing effect can be made worse by incorrect fuel or over-fueling.

Carron stoves

Few things in life give such simple pleasure as the warmth and character a real wood burning stove brings to a home.

Both classic in design and extremely practical, a Carron stove is an efficient and clean way to enjoy the charm of a solid fuel-real fire.

There really is nothing quite like owning a Carron stove.

Quite simply some of the finest stoves available.
